SX-200 ICP | For Hospitality

 **MITEL** | it's about **YOU**

Advanced, Affordable Communications Solution for Small to Medium Properties

Guests today expect a certain level of service. Your communications system must meet these expectations as well as enable revenue-generating opportunities. Your system must be reliable so that your focus can remain on your key business drivers of guest occupancy and guest experience and drive increased revenue.

The Mitel® Hospitality Solution for Small to Medium Properties is based on the Mitel SX-200® IP Communications Platform (ICP). An expandable, hospitality feature-rich voice communications system, the SX-200 ICP enhances guest services while helping to smooth operations, increase productivity and capture revenue. It provides the best all-in-one communications system your property needs right now with the option to add features and functionality as your requirements change.

Enhances guest service while helping to smooth operations, increase productivity and capture revenue with Mitel SX-200 ICP for hospitality.

Mitel SX-200 IP Communications Platform (ICP)

Business Benefits

Ensure efficient check-in and check-out

Guests don't want to wait in line to check in, and once they get to their rooms they want immediate access to their guest services. The Mitel SX-200 ICP, combined with a leading third-party property management systems (PMS), means guest room communication services are enabled upon check-in; streamlining the check-in process to better serve the next guest. For small properties, handling calls and access to guest room status is simple and intuitive via the "Guest Room" key on the Mitel 5340 IP Phone as part of the sub-attendant feature suite. Efficient, prompt customer service is key in the hospitality industry.

Increase staff efficiency and save costs

Integrated auto-attendant enables your property to offer prompt and professional automated service for the most often requested on-site services. This means guests don't need to wait for the front of house to answer their requests for information. It also means you can better manage staffing levels to save costs and enable more customer-facing service during peak periods.

Meet and exceed business traveler needs

Business travelers demand office functionality when at a hotel. The SX-200 ICP built-in embedded applications like messaging, and Wi-Fi 802.11 offers the guests business level services so that calls won't be missed and messages are available for retrieval, both on and off the property. The SX-200 ICP also supports a Direct Inward Dial Guest Server option to enable guests to provide their clients with a direct phone number that bypasses the hotel operator and connects the call directly to their room, providing a professional appearance and improving hotel

staff efficiency for handling calls. And thanks to a built-in recorded announcement feature, guests can hear information on services offered on your property that can further drive revenue opportunities.

Provide mobility to guests and staff

Wireless services within hotels are expected to grow in demand over the next several years. The SX-200 ICP offers it today. By twinning a Mitel-supported 802.11 wireless handset with a guest room phone, guests can be anywhere on your property where there is coverage and not miss important calls. By enabling staff to move about and also receive calls wherever coverage is provided, their efficiency is also increased. And by allowing Meeting Managers to call hotel services using a wireless handset for meeting requirements, opportunities to generate revenue for services and secure meetings are never missed.

Enhance safety and security

The SX-200 ICP supports 911 / lockout notification to emergency medical services (EMSs) services as well as provides on-site Emergency 911 alarm notification to your system's main console, display sets, and to Mitel-supported 802.11 wireless telephones. This enables staff to direct emergency services when they arrive. In addition, an E911 email notification can be sent to a distribution list providing an additional layer of emergency staff instant notification on or off the property.
